

Albert Einstein

Research Physicist · Professor · Patent Clerk

When I am not reviewing patents, I carry out thought experiments. My interests span from pollen grains to synchronizing clocks on moving trains. I wrote a small number of articles that attracted a decent amount of attention. I also designed large unifying theories and models that turned out to be surprisingly powerful and robust.

Ø GOALS

I am looking for opportunities to experiment, in labs or in thoughts, to deeply understand the laws of physics and how clocks work.

I like having time to think my ideas through carefully, challenging common sense as well as my own assumptions.

66 PHILOSOPHY

Here are some thoughts that guide my actions as a professor and as a scientist

Success is a few simple disciplines, practiced every day; while failure is simply a few errors in judgment, repeated every day.

– Jim Rohn

66 With most subjects, it is more important to really understand the basic material than have exposure to more advanced concepts.

- S. S. Skiena

S Besides the noble art of getting things done, there is the noble art of leaving things undone. The wisdom of life consists in the elimination of non-essentials.

- Lin Yutang

66 The people that really create the things that change this industry are both the thinker and doer in one person. [...] It's very easy to say "I thought of this three years ago". But usually when you dig a little deeper, you find that the people that really did it were also the people that really worked through the hard intellectual problems as well.

- Steve Jobs

66 It is not that I'm so smart. But I stay with the questions much longer.

- Me (ha ha)

☐ SELF-EDUCATION

Oct 1945

Growing Mushrooms in the Sky

PRINCETON VIA COURSERA 🖵

Nulla malesuada portitior diam. Donec felis erat, congue non, volutpat at, tincidunt tristique, libero. Vivamus viverra fermentum felis. Donec nonummy pellentesque ante. Phasellus adipiscing semper elit. Proin fermentum massa ac quam.

Results: Statement of Accomplishment.

Oct 2013

CS191x: Quantum Mechanics and Quantum Computation

BERKELEY VIA EDX 🖵

This online class was taught by Pr. Umesh Vazirani. It covered theoretical concepts of quantum physics (e.g. superposition of states, entanglement of particles) as well as practical implementations of quantum algorithms such as Shor's algorithm to factor large numbers.

Results: Statement of Accomplishment.
